

Emanuel Paulo

Software Developer

LISBON | +351 931 656 628 | emanueldemara@gmail.com | linkedin.com/in/emanueldemara | emanueldemara.netlify.app

EDUCATION

Lucrecio dos Santos Technical Institute (ITLS)

Diploma in Software Engineering

Angola, Luanda

february. 2019 – July 2023

EXPERIENCE

Junior Java Developer

Asseco PST

May 2025 – Present

Portugal, Lisbon

- Led the migration of legacy banking systems to a modern, scalable architecture using Java and Spring Boot.
- Implemented key financial features, including bank transfers and secure transactional flows.
- Optimized and managed SQL-based database structures to support high-volume operations.
- Developed and integrated RESTful APIs with robust security and logging.
- Automated CI/CD workflows using GitLab pipelines, significantly improving delivery velocity.
- Containerized services using Docker for consistent deployment environments.
- Created comprehensive test suites using JUnit and Testcontainers for unit and integration testing.
- Collaborated with cross-functional teams in Agile environment, contributing to sprint planning and technical design.
- Ensured compliance with European banking standards and internal governance practices.
- Delivered solutions impacting thousands of users across major European banking platforms.

Junior Java Developer

Critical Techworks BMW Group

April 2024 – April 2025

Portugal, Lisbon

- Developed high-performance APIs using Java and Quarkus, ensuring efficiency and scalability for BMW applications
- Designed and maintained a robust microservices architecture, utilizing Quarkus-native features for distributed services.
- Implemented database solutions using Panache ORM and optimized SQL queries, improving system performance and data consistency
- Built secure and well-documented RESTful services, adhering to best practices and integrating with various BMW systems
- Incorporated reactive programming with the Mutiny API, enabling efficient asynchronous processing that **increased** application responsiveness, handling real-time data for over 1000 transactions daily.
- Deployed applications using Docker and established CI/CD pipelines, automating testing and optimizing production workflows, which led to a 30% reduction in deployment time.
- Created unit and integration tests using JUnit 5, Mockito, and Quarkus-native testing tools, ensuring code coverage and production stability
- Conducted comprehensive front-end testing with Jest, ensuring high quality and stability in UI components, achieving 98% code coverage as reported by Sonar, which directly **elevated** user experience ratings.

TECHNICAL SKILLS

Languages: Java, NoSQL (MongoDB), SQL (Postgres), JavaScript, HTML/CSS

Frameworks: Spring, Quarkus, Angular, TypeScript, JUnit, Mockito, Panache, Hibernate

Developer Tools: Git, Docker, Azure, VS Code, IntelliJ, Grafana, Jenkins, Maven
